

How BODIES ORBIT (How Things go Around)

F_{CP} , F_{CF} , v

Centripetal F_{CP} is the "motivating force"
balanced by the Centrifugal force F_{CF}

— THIS MUST ALWAYS HOLD TRUE —

Things are favored to stay in orbit

$$\longleftrightarrow F = m \frac{v^2}{r}$$

as long as the "driving force" F_{CP} is
balanced by F_{CF} (centrifugal force)

This dynamical force has existed since
the beginning of time (Big Bang).

Dynamical Force F should complete

The Theory of Everything
